OPERATING ENGINEERS 101

Operating Engineers 101 is a growing influential organization with members throughout the western half of Missouri and the state of Kansas.

WHY UNION?

- Paid on the job training, journeyman mentorship, and endless training opportunities.
- Great starting pay along with excellent healthcare and retirement benefits.
- Our members receive a fair wage negotiated by Local 101 and is voted on for approval by the members.
- Why leave the decision of your yearly wage increase up to a company that is looking for every measurable way to keep cost down?
- Stationary Engineer Training at the International Training and Education Center in Crosby, Texas. For approved training, all expenses are paid including, travel to and from.

Stationary Engineers Local 101

Missouri & Kansas

UNION REPRESENTATION

Employees in Missouri and Kansas who are not protected by a collective bargaining agreement (Union) are at-will employees, which means they can be terminated at any time and for nearly any reason. Our Union members receive a fair wage negotiated by Local 101 and is voted on for approval by the members. By becoming a member of the Union you will gain rights under the law that you do not have as an individual.

Who is Local 101?

Local 101 is part of the International Union of Operating Engineers. The IUOE has nearly 400,000 members throughout the U.S. and Canada. Local 101 was formed in 1902. Before Local 101 there was Local 6 of Kansas City, Missouri. Local 6 was one of the first of six Unions formed, founded as the National Union of Steam Engineers in 1896. This name was chosen simply by reason of steam practically being the only source of power at the time which powered all operations and equipment exclusive to the Unions memberships. Local 6 of Kansas City, Missouri would remain its own stand-alone stationary union until merging with Local 101 in 1995.

WHAT IS A STATIONARY ENGINEER?

Local 101 is a mixed Union consisting of Stationary and Hoisting & Portable Engineers. The work of Stationary Engineers vary from HVAC systems, boilers, chillers and much of the mechanical components interior to manufacturing, commercial and health care facilities. We ensure that the equipment operates safely, economically and within the established limits by monitoring attached meters, gauges, and computerized controls. We are also responsible for startup, regulating, repair and shutdown of equipment.

BECOMING A STATIONARY ENGINEER

- Entry level ability and knowledge of HVAC and function of mechanical components
- Ability to troubleshoot, diagnose, repair, and properly make necessary adjustments to controls
- Communicate well with others, have a broad work ethic and a willingness to learn from Journeyman Engineers
- EPA 608 Certification is a plus, but not required
